

App Dev Scope & Functionality Overview

The mobile application will be available on both **Android and iOS** platforms.

It will have two main roles: **User** and **Admin**, with separate pages and access levels.

Here are the pages within the app:

1. Starting page (with login and sign up buttons)
2. Sign up page
3. Login page (email + password)
4. User Landing page (with panic button)
5. User details (user can view, edit details or delete account)
6. Admin Landing page (3 options to edit SMS recipients, user management and App usage metrics)
7. Admin - Recipient page
8. Admin - User Management page
9. Admin - App usage metrics

Page Details:

1. Starting Page

- Simple, clean opening screen with two main buttons: **“Sign Up”** (for new users) and **“Login”** (for existing users).
 - Leads the user to the respective screen.
-

2. Sign-Up Page

Users can create a new account by entering the following details:

All fields are mandatory to ensure proper identification and emergency handling.

- First Name
- Last Name
- Date of Birth
- Phone Number
- Agent Name (user can type)
- Emergency Contact 1 (Name + Phone Number)
- Emergency Contact 2 (Name + Phone Number)
- Emergency Contact 3 (Name + Phone Number)
- Password

After completing the form, the user's details are securely saved, and they are redirected to the main app screen.

App Dev Scope & Functionality Overview

3. Login Page

- Existing users can log in using **email and password**.
 - Includes a **“Forgot Password”** option:
 - Asks the user to verify identity by entering details like Email, Date of Birth, Phone Number, and Agent Name, and then allows them to reset the password.
-

4. User Landing Page (Main Screen)

- Displays a large **red Panic Button** in the center of the screen.
- When the user taps the Panic Button:
 1. The app retrieves the phone’s precise location.
 2. The phone’s **SMS app opens automatically** with a **prefilled message** containing:

<User’s name> has triggered the panic button.

Here is the location: <Google Maps link>

Agent name: <Agent’s name>

Emergency contacts:

- <Contact 1>

- <Contact 2>

- <Contact 3>

3. The recipient list (who receives the SMS) is decided by the Admin.
 4. After the user presses **Send** in the SMS app, the app automatically opens the **dial pad** with the primary contact number (Garry) already filled in.
The user can then press **Call** manually.
-

5. User Details Page

- Displays all the user’s personal details as entered during sign-up.
 - Users can:
 - Edit or update any information
 - View their current emergency contacts
 - **Delete their account and all associated data** from the system permanently
-

App Dev Scope & Functionality Overview

6. Admin Landing Page

- Visible only to users with **Admin access** (Garry).
 - Contains three main options:
 1. **Edit SMS Recipients**
 2. **Manage Users**
 3. **View App Usage Metrics**
-

7. Admin — Recipient Management Page

- Admin can:
 - Edit the **primary contact number** to which panic SMS messages and calls should go
 - Add or remove additional recipients who will receive the panic SMS
 - Only the **primary contact number** will be used for phone calls; other recipients will receive the text alert.
-

8. Admin — User Management Page

- Displays a searchable list of all registered users.
Columns include:
 - Name
 - Email
 - Phone Number
 - Agent Name
 - Admin can:
 - Search for a specific user
 - Delete users if required
-

9. Admin — App Usage Metrics Page

- Allows Admin to view app activity and user engagement.
- Includes a **time-period filter**:
 - Last 7 days
 - Last month
 - All time

App Dev Scope & Functionality Overview

Metrics shown:

1. **Number of new signups** during the selected period
2. **Number of active users** (users who pressed the panic button at least once)
3. **Table of top active users**, showing who triggered the panic button the most (descending order)

Data Handling Notes

- Every time a user presses the panic button, an entry is recorded in the database, storing:
 - User's name
 - Agent name
 - Timestamp
 - Coordinates (Google Maps link)
- This data can be filtered and viewed by the admin at any time, even if SMS sending failed or was cancelled.

Technical Summary

- The app will **not** use Twilio or any third-party SMS provider.
- SMS messages are manually sent through the phone's **built-in messaging app**, ensuring reliability and user control.
- All app data (user details, location logs, admin configurations) is securely stored in **Firebase**.
- The Firebase free tier will handle all expected usage (up to 1,000 users).

Development Approach

- **Tech Stack:** React Native (Expo) + Firebase (Auth, Firestore, Analytics)
- **Version Control:** GitHub
- **Testing:** Manual testing on Android and iOS devices + Firebase Analytics monitoring
- **Deployment:** Play Store (Android) + App Store (iOS)
- **Communication:** Weekly progress updates

App Dev Scope & Functionality Overview

Development phases & time estimate

- **Phase 0 — Prep & infra**
- **Phase 1 — Android (MVP)**
 - UI, SecureStore, permission flow, composer flow, Firestore recipients & attempts
- **Phase 2 — iOS & polish** (ad-hoc iOS build/setup included).
- **Phase 3 — QA & release**

Total MVP estimate: ~200 to 250 hours ~7 to 9 weeks

Project Cost & Payment Plan

Total Development Cost: USD \$900

This covers:

- End-to-end development of the mobile app for both Android and iOS
- Admin dashboard and analytics functionality
- Firebase backend setup and configuration
- Assistance in publishing the app on Google Play Store and Apple App Store

Platform / Infrastructure Charges:

Any platform fees (e.g., Google Play Developer account, Apple Developer account, domain or hosting for Privacy Policy page, etc.) are to be paid directly by the client at the time of requirement. Such fees are charged as per the rates listed on the respective official platforms at the time of registration. All such requirements will be communicated at least 24 hours in advance.

Post-Launch Support

After successful delivery and deployment (completion of Phase 3):

- A **60-day support window** will be provided at no additional cost.
- During this period, up to **3 minor bug fixes or small modifications** will be accommodated within the agreed scope.
- Any additional changes or feature enhancements beyond this scope will be handled as part of a separate engagement.
